libsigrokdecode API

Introduction

The sigrok project aims at creating a portable, cross-platform, Free/Libre/Open-Source signal analysis software suite that supports various device types (such as logic analyzers, oscilloscopes, multimeters, and more).

libsigrokdecode is a shared library written in C which provides the basic API for (streaming) protocol decoding functionality.

The protocol decoders are written in Python (>= 3.0).

API reference

See the "Modules" page for an introduction to various libsigrokdecode related topics and the detailed API documentation of the respective functions.

You can also browse the API documentation by file, or review all data structures.

Mailing lists

There are two mailing lists for sigrok/libsigrokdecode: sigrok-devel and sigrok-commits.

IRC

You can find the sigrok developers in the #sigrok IRC channel on Freenode.
